Noida Sector 62 / 63 Industry Opportunity Explorer: demonstration note

ConveGenius.AI · internal research pilot · prepared October 2026 · not an official employment statistic

PURPOSE

Help ITI and skilling planners see which occupations employers in Noida Sectors 62 and 63 are publicly advertising, what they ask for, and which openings an employer has actually confirmed, before any course or cohort decision.

WHAT THE PILOT SHOWS TODAY

ITEM	STATUS ON 16 OCT 2026
Public hiring signals	17 current records (Sector 62: 8, Sector 63: 9) plus 1 older post, all with source links
Employer-confirmed openings	**0**. No employer has been contacted yet, so no vacancy total is shown
Sector 62 pattern (sample)	Contact centre, office administration, IT operations and sales roles
Sector 63 pattern (sample)	Electronics and mechanical production, quality inspection, sales and digital roles
Trends, worker sentiment, coverage of ITI pass-outs	Not available. The app explains which data is missing

HOW TO READ IT

LABEL	MEANING
What the ad says	Facts from the ad or the employer, with date and link
What we think	Our reading (type of work, related ITI trade, how reliable the location is)
What to do next	Plan, call the employer, or keep as background

A job advert is a signal, not a vacancy. An opening counts only after the employer confirms it and a second reviewer approves the record.

DEMONSTRATION PATH (10 MINUTES)

1. **Quick start:** choose Sector 63 and "ITI Electronics Mechanic"; the list narrows to ads that may suit that learner.
2. **Jobs map:** click a dot or ad; read what the ad says, what we think and what to do next; open the original ad.
3. **Compare 62 and 63:** type of work, skills asked for, and why no trend is shown yet.
4. **Match a learner:** see which ads are worth a call, which need more skills, and which the learner is not eligible for as written.
5. **Next steps:** five ads are flagged "call these employers first"; none is yet ready for planning.
6. **Record an employer call (team sign-in):** the confirmed-jobs count rises only after a second person approves.

SAFEGUARDS

SAFEGUARD	HOW
No inflated numbers	Search totals and advert claims never become vacancy counts; duplicates counted once
Location honesty	Records whose location is only a portal label are marked; adjacent sectors excluded
Privacy	No learner personal data; employer contacts restricted; interviews need recorded consent
Accountability	Role-based access, second-person approval, append-only audit log
Lawful collection	Manual capture and CSV upload; no scraping of gated or private accounts

DECISIONS REQUESTED

DECISION	WHY
Approve employer outreach for the 5 priority records	Converts signals into confirmed openings with pay, start date and ITI acceptance
Share expected ITI pass-outs by trade for Gautam Buddh Nagar	Needed for any demand-coverage ratio
Approve a consented interview round (workers, learners, employers)	Needed for commute, pay, safety and retention insights
Schedule a second capture wave	Needed before any statement about rising or falling requirements
